Introduction to Telling Stories with Data

Author: Nicholas G Reich

This material is part of the **statsTeachR** *project*

Communicating ideas with evidence

What is a narrative? [From the OED]

An account of a series of events, facts, etc., given in order and with the establishing of connections between them; a narration, a story, an account.

What is data? [From Google: literally, "what is data"]

**da·tum**
/ˈdātəm,ˈdatəm/ ◀))

noun
plural noun: **data**

1. a piece of information.
   - an assumption or premise from which inferences may be drawn.
2. a fixed starting point of a scale or operation.

Origin

LATIN	LATIN	
dare	datum	datum
give	something given	mid 18th century

mid 18th century: from Latin, literally 'something given,' neuter past participle of *dare* 'give.'

Use over time for: data

Is Uber Making NYC Rush-Hour Traffic Worse?

By CARL BIALIK, REUBEN FISCHER-BAUM and DHRUMIL MEHTA

Uber adds (a little) to Manhattan evening rush
Average change in Uber pickups, taxi pickups, and total Uber + taxi pickups by hour of day; April-June 2014 vs. April-June 2015

Thousands of new pickups outside Manhattan core
Average change in Uber pickups, taxi pickups, and total Uber + taxi pickups by hour of day; April-June 2014 vs. April-June 2015

When Teamwork Doesn't Work for Women

Economic View

By JUSTIN WOLFERS JAN. 8, 2016

Getting Credit Where Credit Is Due

Male and female economists are given roughly equal credit for work they perform alone, but in group work, women receive far less credit.

Consequences of writing one more paper on the probability of earning tenure

Solo-authored research

Men	8%
Women	9%

Co-authored research

Men	8%
Women	2%
Source: Heather Sarsons, "Gender Differences in Recognition for Group Work"

Who Gets the Credit for Collaboration?

Women get full credit, in terms of earning tenure, only when writing papers with other women. Writing one with a man has no impact on the female author, only the male.

Effect of writing an additional paper on the probability of earning tenure

When a male economist is a co-author

With women	6%
With both genders	8%
With men	7%

When a female economist is a co-author

With women	9%
With both genders	4%
With men	0%

How to tell a story using data

Telling stories with data requires

- detective work
- creativity, both scientific and artistic
- experimentation
- good data, (good data does not nescessarily equal big data)

A common tool: regression

- The goal is to learn about the relationship between a covariate (predictor) of interest and an outcome of interest.
    - Some models focus on prediction.
    - Other models focus on description.
- Regression is an exercise in inferential statistics: we are drawing evidence and conclusions from data about "noisy" systems.

State-level SAT score data (1994-95)
# State-level SAT score data (1994-95)
State-level SAT score data (1994-95)
The SAT example

What is the outcome variable?

What is the covariate or predictor variable?

What other data might be part of this story?

State-level SAT score data (1994-95)

State-level SAT score data (1994-95)

State-level SAT score data (1994-95)
# State-level SAT score data (1994-95)

State-level SAT score data (1994-95)

State-level SAT score data (1994-95)

State-level SAT score data (1994-95)

What can we conclude from all of this? (BTW, this is an example of "Simpson's Paradox".)

Beware of correlation!

Beware of correlation!

1

Regression modeling

The process of using data to describe the relationship between outcomes and predictors is called modeling.

- Models are models, not reality.
- "All models are wrong, but some are useful."
- Introduce structure to our model that balances realism with "goodness of fit".

Things to come

- Tools to help tell stories with data.
  - Software
  - Statistical methods
- Practice developing and conceiving models/stories.
